Limited funding available to support
entrepreneurial-minded:

- student-led projects
- campus events
- conference attendance and presentations

Open to all engineering students and Fulton
student organizations.

*The KEEN Student Mini-Grant has provided our team with the opportunity to display our **entrepreneurial mindset** to the worldwide community and **make connections** with others along the way. Our **curiosity** allowed us to find **innovative** ways to solve real world problems while **creating value** by contributing to the bioengineering community.*

Funding for Research

The Ira A. Fulton Schools of Engineering and ASU Kern Project are pleased to offer funding to engineering students conducting research that integrates the **entrepreneurial-mindset**.

*Create value through research in **Developing an Educational Robotic Platform**: an **entrepreneurial mindset**, in addition to the robot itself, will increase educators' and students' accessibility to robotics. By replacing expensive and proprietary kits with readily available materials and **open methods**, more students, especially those living in underprivileged communities, can be **introduced to engineering**.*
